WRITTEN ON 29 APRIL 1994  
RELATING TO THE ASSESSMENT OF THE RESULTS OF THE  
NEW REHABILITATION METHOD

This is according to the statements contained in the final record of the first sponsored rehabilitation cycle which was realized in the time between April 10 and April 29, 1994.

The rehabilitation was realized in the Recreation Centre "SYRENA" at Mielno nr.Koszalin with the participation of Polish physicians and rehabilitants, with Russian physicians and rehabilitants present as consultants.

The objective of the rehabilitation cycle was to present the new rehabilitation method of the remnant form of the infantile cerebral palsy by utilizing an appropriately adapted suit "ADELI 92" and the clinical results obtained.

At the seminar summarizing the fortnight's rehabilitation process, the Polish and Russian specialists reduced their opinion that for all ten patients, regardless of the degree of advancement of their disease, improvement of the functional condition of the patients was obtained, which was ascertained by objective methods.

The assessment took also into account the opinion of the rehabilitated patients themselves and their parents.

The specialists taking part in the rehabilitation cycle and assessing the results obtained stated that the new method should

be applied in rehabilitation of children with a remnant form of the infantile cerebral palsy in the contrary of Poland.

The rehabilitated group of ten patients will be subject to periodical follow-up tests in order to define the durability of the results obtained.
